Solution:

Total resistance, R_eq = R1 + R2 + R3 = 10 + 20 + 30 = 60?

Problem 2: Voltage Divider

Determine the output voltage across R2 in a voltage divider circuit with V_in=12V, R1=1k?, R2=2k?.

Solution:

V_out = V_in R2 / (R1 + R2) = 12V 2000? / (1000? + 2000?) = 12V 2000 / 3000 = 8V

Problem 3: AC Circuit Analysis

Find the impedance of an inductor L=0.5H and capacitor C=100?F at 60Hz.

Solution:

X_L = 2?fL = 2? 60 0.5 ? 188.5?

X_C = 1 / (2?fC) = 1 / (2? 60 100e-6) ? 26.5?

Impedance Z = ?(X_L^2 + X_C^2) ? ?(188.5^2 + 26.5^2) ? 190.3?

- **Solution approach:** Recognize the pattern involves doubling each time; so, the next number is 32.

2. Arithmetic word problems

Word problems that require setting up equations or logical reasoning to find the answer.

- **Example:** A school has 480 students. If 3/4 of them are girls, how many boys are there?
- **Solution approach:** Find the number of girls (480 × 3/4 = 360), then subtract from total to find boys (480 - 360 = 120).

3. Geometry challenges

Problems involving shapes, angles, perimeters, areas, and volumes.

- **Example:** A triangle has angles of 35° and 65°. What is the measure of the third angle?
- **Solution approach:** Use the fact that the sum of angles in a triangle is 180°, so 180° - (35° + 65°) = 80°.

4. Logical deduction and riddles

These puzzles develop reasoning skills and often have multiple steps.

- **Example:** There are three boxes: one contains apples, another contains oranges, and the third contains both apples and oranges. All boxes are labeled incorrectly. You may pick only one fruit from one box. How can you correctly label all boxes?
- **Solution approach:** Pick from the box labeled 'mixed'. Since the label is wrong, it contains only one type of fruit. Use this to relabel all boxes accordingly.
